## ABOUT THE DEPARTMENT

Computer Science & Engineering is the Core Department of the Arvind Gavali College of Engineering.

The Department of Computer Science and Engineering (CSE) was established in 2010, affiliated with Dr. Babasaheb Ambedkar Technological University (DBATU), Lonere. The CSE department is originally offering a 60-student intake for the B. Tech. program. The undergraduate intake has doubled to 120 seats. Arvind Gavali College of Engineering, Satara, has introduced the M.Tech. in Computer Science and Engineering (CSE) program from the Academic Year 2026–27 having intake 12, providing students with an opportunity to pursue advanced studies and research in the field of Computer Science and Engineering. The department was accredited by National Assessment and Accreditation Committee (NAAC 1<sup>st</sup> cycle) in 2016 and 2023(NAAC 2<sup>nd</sup> cycle) and National Board of Accreditation (NBA) in the year 2023.

The department has all UGC approved faculty members. The department has well-equipped laboratories. With the growing demand for Computer Science Engineers in the Government and private sectors, the department is making the best efforts to produce highly trained and capable engineers who can take up the challenges of the real world. The quality of academic instructions, guidelines, and college activities are designed to produce competent and successful engineers. In the Department, the focus is on preparing professional engineers.

Over the past decade, nine batches have graduated from the department. Students have consistently secured placements in respected companies and also pursued higher studies at prestigious universities. We actively support internships and facilitate participation in national and international competitions, hackathons, project exhibitions, and sports events. Our students have earned accolades at contests such as Diplex, Avishkar, and Rotarex.

The department is well-equipped: we feature smart classrooms with interactive panels, modern laboratories loaded with industry-standard software and hardware, and other academic resources. Our infrastructure supports hands-on and experiential learning, vital for today's tech-oriented education.

For the extra curriculum activities, the Departmental Association (CESA) has been established by the students. This association conducts various technical and cultural events regularly.

“Nothing is impossible for Computer Science Engineers with Skill Oriented Knowledge.”

## DEPARTMENT VISION

To emerge as a premier center of excellence in postgraduate computer science education and research, nurturing highly skilled innovators and ethical leaders who drive global technological advancements for the sustainable benefit of industry and society.

## DEPARTMENT MISSION

|           |                                                                                                                                                                                                                                                                         |
|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>M1</b> | <b>Advanced Technical Excellence:</b> To impart deep theoretical and practical knowledge in core computing, advanced algorithmic design, and emerging technologies like Artificial Intelligence and Data Science.                                                       |
| <b>M2</b> | <b>Research, Innovation &amp; Problem Solving:</b> To cultivate a robust research culture that empowers students to investigate complex IT problems, utilize modern tools, and engineer innovative, scalable, and secure software systems.                              |
| <b>M3</b> | <b>Leadership, Ethics &amp; Societal Impact:</b> To instill professional leadership, strong ethical values, and a commitment to lifelong learning, enabling graduates to design computing solutions that responsibly address global societal and industrial challenges. |

## PROGRAM EDUCATIONAL OBJECTIVES (PEO)

|              |                                                                                                        |
|--------------|--------------------------------------------------------------------------------------------------------|
| <b>PEO 1</b> | Establish a successful career or pursue higher education globally using a strong computing foundation. |
| <b>PEO 2</b> | Design secure computing systems that ethically address industrial and societal needs.                  |
| <b>PEO 3</b> | Exhibit leadership, ethics, and lifelong learning to adapt to rapid technological changes.             |

## PROGRAM OUTCOMES (PO)

|             |                                                                                                                                                                                                                       |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PO 1</b> | An ability to independently carry out research/investigation and development work to solve practical problems.                                                                                                        |
| <b>PO 2</b> | An ability to write and present a substantial technical report/document.                                                                                                                                              |
| <b>PO 3</b> | Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program. |
| <b>PO 4</b> | Use research methods to investigate complex IT problems and derive valid conclusions.                                                                                                                                 |
| <b>PO 5</b> | Apply modern IT tools and techniques to complex computing activities, understanding their limitations.                                                                                                                |

**COURSE Pre-Requisite:** Basic knowledge of Engineering Mathematics, Linear Algebra, Probability and Fundamentals of Computer Science.

### **COURSE DESCRIPTION:**

This course provides mathematical foundations required for advanced computing, data science, cryptography, intelligent systems and machine learning. It emphasizes linear algebra, probability theory, statistical inference, number theory and numerical methods used in computational analysis, optimization and secure communication.

### **COURSE OBJECTIVES:**

- To provide mathematical foundations required for advanced computing, data science and intelligent systems.
- To develop understanding of linear algebra, probability and statistical inference used in machine learning and computational analysis.
- To introduce number theoretic techniques used in cryptography and secure computing.
- To apply mathematical and statistical tools for solving real-world engineering and research problems
- To enhance analytical and computational skills through mathematical modelling and data analysis techniques.

### **COURSE OUTCOMES:**

|     |                                                                                                            |
|-----|------------------------------------------------------------------------------------------------------------|
| CO  | After the completion of the course, the students should be able to                                         |
| CO1 | Apply concepts of vector spaces, matrix factorization and linear transformations in computational systems. |
| CO2 | Analyze statistical distributions and inferential techniques for engineering datasets.                     |
| CO3 | Use number theory concepts in cryptographic and algorithmic applications.                                  |
| CO4 | Apply probability models and regression techniques for predictive analytics.                               |
| CO5 | Utilize mathematical methods for optimization, machine learning and intelligent data analysis.             |

**CO-PO MAPPING:**

| CO  | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 |
|-----|-----|-----|-----|-----|-----|-----|
| CO1 | 3   | 2   | -   | -   | 2   | -   |
| CO2 | 3   | 3   | -   | 2   | 2   | -   |
| CO3 | 3   | 2   | 2   | -   | 2   | -   |
| CO4 | 3   | 3   | 2   | 2   | 3   | -   |
| CO5 | 3   | 3   | 3   | 2   | 3   | -   |

**ASSESSMENT SCHEME:**

Two components of Continuous Assessment (CA-1, CA-2), Mid Semester Examination (MSE) and End Semester Examination (ESE) having 30%, 20% and 50% weightage respectively.

| Assessment Component | Marks |
|----------------------|-------|
| CA1                  | 15    |
| MSE                  | 20    |
| CA2                  | 15    |
| ESE                  | 50    |

**CA1** and **CA2** are based on Assignment/ Declared test/ Quiz/Seminar/Group discussions presentation, etc.

**MSE** is based on 50% of course content.

**ESE** is based on 100% course content with 60-70% weightage for course content covered after MSE.

**COURSE CONTENTS:**

| Unit No. | Unit Title and Contents                                                                                                                                                                                                                                                                                                                                                                                                            | Hours |

| <b>Course Code:</b> 26MFE1102                                         | <b>4</b> | <b>0</b> | <b>--</b> | <b>4</b>      |

**COURSE Pre-Requisite:** Theory of Computation Design and Analysis of Algorithm.

#### **COURSE DESCRIPTION:**

Covers sophisticated techniques for designing efficient algorithms and analyzing their complexity, focusing on optimization, randomized algorithms, approximation, and handling NP-hard problems. Key areas include advanced data structures, graph algorithms, flow networks, string matching, and number theory, with an emphasis on algorithmic paradigms such as divide-and-conquer, greedy, and dynamic programming.

#### **COURSE OBJECTIVES:**

- Analyze the non-recursive and recursive algorithms and to represent efficiency of these algorithms in terms of the standard Asymptotic notations.
- Devise the Brute Force and Divide and Conquer techniques to design the algorithms and apply these methods in designing algorithms to solve a given problem.
- Explain the Decrease and Conquer, Transform and Conquer algorithm design techniques, and Time versus Space Trade-offs
- Get the idea of Greedy method and dynamic programming methods and apply these methods in designing algorithms to solve a given problem
- Describe and illustrate the idea of Backtracking and Branch and Bound algorithm design techniques to solve a given problem

#### **COURSE OUTCOMES:**

| <b>CO</b>  | <b>After the completion of the course, the students should be able to</b>                                                                                                       |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CO1</b> | Explain the algorithm design techniques and standard asymptotic notations.                                                                                                      |
| <b>CO2</b> | Interpret. Graph data structures are particularly useful in fields such as social Network analysis, recommendation systems, and computer networks.                              |
| <b>CO3</b> | Describe String matching algorithms it helps in performing time-efficient tasks in multiple domains                                                                             |
| <b>CO4</b> | Identify and explain introduces important algorithms and techniques of scientific computing, focusing on the areas of linear algebra and matrix computations.                   |
| <b>CO5</b> | Describe A linear programming algorithm finds a point in the polytope where this function has the smallest (or largest) value if such a point exists and Randomized Algorithms. |

**ASSESSMENT SCHEME:**

Two components of Continuous Assessment (CA-1, CA-2), Mid Semester Examination (MSE) and End Semester Examination (ESE) having 30%, 20% and 50% weightage respectively.

| Assessment Component | Marks |
|----------------------|-------|
| CA1                  | 15    |
| MSE                  | 20    |
| CA2                  | 15    |
| ESE                  | 50    |

**CA1** and **CA2** are based on Assignment/ Declared test/ Quiz/Seminar/Group discussions presentation, etc.

**MSE** is based on 50% of course content.

**ESE** is based on 100% course content with 60-70% weightage for course content covered after MSE

**CO-PO MAPPING:**

| CO  | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 |

**COURSE Pre-Requisite:** Database Management Systems, Computer Networks

### **COURSE DESCRIPTION:**

Big Data Analytics and Visualization is a course designed to provide students with knowledge and practical skills for handling, processing, analyzing, and visualizing large-scale data generated from various sources. The course introduces concepts of big data, data analytics techniques, distributed computing frameworks, and data processing tools used for extracting meaningful insights from complex datasets. It also focuses on data visualization methods and tools to represent analytical results effectively through charts, dashboards, and graphical reports. Students gain understanding of technologies such as Hadoop, MapReduce, data mining, statistical analysis, and visualization techniques that support data-driven decision-making in real-world applications.

### **COURSE OBJECTIVES:**

- To understand the fundamental concepts, architecture, and challenges of Big Data Analytics.
- To learn data processing and distributed computing techniques used for handling large-scale datasets.
- To apply analytical methods and tools for extracting meaningful insights from structured and unstructured data.
- To develop skills in data visualization for effective interpretation and presentation of analytical results.
- To understand real-world applications of big data technologies in decision-making and problem-solving.

### **COURSE OUTCOMES:**

| <b>CO</b>  | <b>After the completion of the course, the students should be able to</b>                                |
|------------|----------------------------------------------------------------------------------------------------------|
| <b>CO1</b> | Understand the concepts, characteristics, architecture, and applications of Big Data Analytics.          |
| <b>CO2</b> | Apply distributed computing and data processing techniques for handling large datasets.                  |
| <b>CO3</b> | Analyse structured and unstructured data using big data analytics methods and tools.                     |
| <b>CO4</b> | Design effective visual representations and dashboards for data interpretation and decision-making.      |
| <b>CO5</b> | Implement big data solutions for real-world applications using modern analytics and visualization tools. |

**ASSESSMENT SCHEME:**

Two components of Continuous Assessment (CA-1, CA-2), Mid Semester Examination (MSE) and End Semester Examination (ESE) having 30%, 20% and 50% weightage respectively.

| Assessment Component | Marks |
|----------------------|-------|
| CA1                  | 15    |

| <b>Title of the Course:</b> Computer Vision | <b>L</b> | <b>T</b>  | <b>P</b>  | <b>Credit</b> |
| <b>Course Code:</b> 26MFE1103               | <b>4</b> | <b>--</b> | <b>--</b> | <b>4</b>      |

**COURSE Pre-Requisite:** Linear Algebra, Probability, Machine Learning, Python Programming.

#### **COURSE DESCRIPTION:**

This course provides a comprehensive understanding of computer vision, covering both classical image processing techniques and modern deep learning-based approaches. It includes image enhancement, feature extraction, segmentation, object detection, motion analysis, and 3D vision. The course also explores advanced topics such as SLAM, generative models, and attention mechanisms, enabling students to develop intelligent vision-based systems for real-world applications.

#### **COURSE OBJECTIVES:**

- To understand image processing fundamentals and feature extraction techniques
- To apply segmentation and classical computer vision algorithms
- To analyze deep learning models for image classification, detection, and segmentation
- To evaluate motion analysis and tracking algorithms
- To design solutions using 3D vision and geometric modelling

#### **COURSE OUTCOMES:**

| <b>CO</b>  | <b>After the completion of the course, the student should be able to</b>           |
|------------|------------------------------------------------------------------------------------|
| <b>CO1</b> | Explain image formation, enhancement techniques, and feature extraction methods    |
| <b>CO2</b> | Apply segmentation, shape analysis, and feature matching techniques                |
| <b>CO3</b> | Analyze deep learning models for image classification, detection, and segmentation |
| <b>CO4</b> | Evaluate motion estimation, tracking, and activity recognition methods             |
| <b>CO5</b> | Design systems using 3D vision, camera models, and multi-view geometry             |

**ASSESSMENT SCHEME:**

Two components of Continuous Assessment (CA-1, CA-2), Mid Semester Examination (MSE) and End Semester Examination (ESE) having 30%, 20% and 50% weightage respectively.

| Assessment Component | Marks |
|----------------------|-------|
| CA1                  | 15    |
| MSE                  | 20    |
| CA2                  | 15    |
| ESE                  | 50    |

**CA1** and **CA2** are based on Assignment/ Declared test/ Quiz/Seminar/Group discussions presentation, etc.

**MSE** is based on 50% of course content.

**ESE** is based on 100% course content with 60-70% weightage for course content covered after MSE

**CO-PO MAPPING:**

| CO / PO | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 |
|---------|-----|-----|-----|-----|-----|-----|
| CO1     | 3   | 2   | 1   | -   | 1   | -   |
| CO2     | 3   | 3   | 2   | 1   | 2   | -   |
| CO3     | 2   | 3   | 3   | 2   | 3   | 1   |
| CO4     | 2   | 3   | 3   | 3   | 2   | 1   |
| CO5     | 2   | 2   | 3   | 3   | 3   | 2   |

### **COURSE Pre-Requisite:**

Computer Networks, Operating Systems, Wireless Communication (basic)

### **COURSE DESCRIPTION:**

Introduces architectures, concepts and challenges of pervasive/ubiquitous computing systems. Covers context-awareness, middleware, mobile/pervasive networking, enabling technologies (sensors, WSN, IoT), interaction and HCI in pervasive settings, and security, privacy, and ethical issues. Emphasis on design of context-aware services, middleware architectures, and applications in smart homes, healthcare, wearable's, and intelligent spaces..

### **COURSE OBJECTIVES:**

- Introduce architectures, vision, and characteristics of pervasive/ubiquitous computing systems.
- Explain enabling technologies (sensors, WSN, IoT nodes, wireless protocols) and resource constraints.
- Teach context collection, reasoning, and middleware design for context-aware services.
- Explore HCI, interaction models, and usability for wearable's and voice-enabled systems.
- Discuss transaction models, security, privacy, trust, and ethical/social implications in pervasive systems.

### **COURSE OUTCOMES:**

| <b>CO</b>  | <b>After the completion of the course the student should be able to</b>                                                |
|------------|------------------------------------------------------------------------------------------------------------------------|
| <b>CO1</b> | Explain the architecture, vision, and characteristics of pervasive and ubiquitous computing systems.                   |
| <b>CO2</b> | Describe enabling technologies (sensors, WSN, IoT nodes, wireless protocols) and constraints in pervasive environments |
| <b>CO3</b> | Design context-aware services and middleware architectures for smart environments (e.g., smart homes, offices)         |
| <b>CO4</b> | Analyze HCI, interaction models, and usability in pervasive settings (wearables, voice-enabled systems)                |
| <b>CO5</b> | Evaluate security, privacy, trust, and ethical issues in pervasive and IoT systems.                                    |

**ASSESSMENT SCHEME:**

Two components of Continuous Assessment (CA-1, CA-2), Mid Semester Examination (MSE) and End Semester Examination (ESE) having 30%, 20% and 50% weightage respectively.

| Assessment Component | Marks |

**Course Pre-Requisite:** Knowledge of Computer Graphics, Human-Computer Interaction, Programming (C++/Python/Unity C#), Linear Algebra and Basic AI concepts.

### **COURSE DESCRIPTION:**

This course introduces students to the rapidly evolving fields of Augmented Reality (AR), Virtual Reality (VR), and Multimedia Computing. Students will develop both theoretical foundations and hands-on implementation skills across the full AR/VR/multimedia pipeline — from media encoding and rendering principles to immersive experience design and deployment. The course bridges computer graphics, human-computer interaction, signal processing, and 3D application development.

### **COURSE OBJECTIVES:**

- Understand fundamentals of AR, VR and MR
- Explore hardware and software components.
- Develop AR/VR applications.
- Understand tracking, rendering and visualization.
- Analyze industrial applications and future trends.

### **COURSE OUTCOMES:**

| <b>CO</b>  | <b>After the completion of the course, the students should be able to</b> |
|------------|---------------------------------------------------------------------------|
| <b>CO1</b> | Explain concepts and technologies of AR/VR/MR.                            |
| <b>CO2</b> | Analyze immersive displays, sensors and tracking systems.                 |
| <b>CO3</b> | Design AR/VR applications using Unity and Unreal Engine.                  |
| <b>CO4</b> | Apply Computer Vision and Rendering Techniques.                           |
| <b>CO5</b> | Evaluate AR/VR solutions for real-world applications.                     |

**CO-PO MAPPING:**

| CO  | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 |
|-----|-----|-----|-----|-----|-----|-----|
| CO1 | 3   | 2   | 1   | -   | 2   | -   |
| CO2 | 3   | 3   | 2   | 2   | 1   | -   |
| CO3 | 3   | 3   | 3   | 2   | 2   | -   |
| CO4 | 3   | 3   | 3   | 3   | 2   | -   |
| CO5 | 3   | 2   | 2   | 2   | 2   | -   |

**ASSESSMENT SCHEME:**

Two components of Continuous Assessment (CA-1, CA-2), Mid Semester Examination (MSE) and End Semester Examination (ESE) having 30%, 20% and 50% weightage respectively.

| Assessment Component | Marks |
|----------------------|-------|
| CA1                  | 15    |
| MSE                  | 20    |
| CA2                  | 15    |
| ESE                  | 50    |

**CA1** and **CA2** are based on Assignment/ Declared test/ Quiz/Seminar/Group discussions presentation, etc.

**MSE** is based on 50% of course content.

**ESE** is based on 100% course content with 60-70% weightage for course content covered after MSE

|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| 1        | <b>Introduction to Multimedia:</b><br>Definition, components, and applications. Multimedia data types: text, audio, image, video, animation. Human perception model for AV systems. Color models: RGB, CMYK, HSV, YCbCr. Multimedia file formats: JPEG, PNG, MP3, AAC, MP4, WebM.                                                                                                                                                                                                                                            | 09    |
| 2        | <b>Lossless compression:</b><br>Huffman, LZW, Run-Length Encoding. Lossy compression: DCT-based image compression, JPEG standard. Audio coding: PCM, ADPCM, MP3/AAC psychoacoustic models. Video compression: Motion estimation, inter/intra-frame coding, H.264/H.265, AV1. Multimedia streaming: protocols (RTSP, HLS, DASH), adaptive bit-rate, CDN, latency optimization.                                                                                                                                                | 09    |
| 3        | <b>3D coordinate systems, homogeneous coordinates, transformations. Rendering pipeline:</b><br>vertex processing, rasterisation, fragment shading. Real-time rendering: OpenGL/Vulkan/WebGL fundamentals. PBR materials, lighting models (Phong, Cook-Torrance). Level of Detail (LoD), occlusion culling, frustum culling. Post-processing: bloom, SSAO, HDR tone-mapping.                                                                                                                                                  | 09    |
| 4        | <b>VR concepts and history; presence, immersion, and embodiment. Head-Mounted Displays (HMDs):</b><br>optics, display specs, refresh rate, FOV. 6DoF tracking: IMUs, optical inside-out and outside-in tracking. VR interaction: gaze, gesture, controller, haptics. Spatial audio: HRTF, ambisonics, room acoustics simulation. VR development pipeline: Unity XR / Unreal VR template. Comfort & accessibility: VR sickness, locomotion design, inclusive UX.                                                              | 09    |
| 5        | <b>AR taxonomy: marker-based, marker less, location-based. Camera calibration: intrinsic and extrinsic parameters, distortion correction. Marker tracking:</b><br>ArUco, AprilTag, QR-code detection. Feature-based tracking: ORB, SIFT, FAST descriptors. SLAM fundamentals: visual odometry, keyframe selection, map maintenance. Plane detection, scene understanding, occlusion handling. AR development: ARKit, ARCore, OpenCV + Unity AR Foundation. Wearable AR: optical see-through vs. video pass-through displays. | 09    |

### **COURSE PRE-REQUISITE:**

This course requires the basic knowledge of Software Engineering, programming concepts, and Software Development Life Cycle (SDLC). Students should also be familiar with software testing, project management basics, and team-based software development practices.

### **COURSE DESCRIPTION:**

This course introduces fundamental concepts of linear differential equations, Fourier series, and Laplace transforms with applications in engineering problems. It also covers discrete mathematical structures including relations, functions, and graph theory. The course emphasizes analytical techniques, problem-solving skills, and the application of mathematical tools in areas such as signal processing, system analysis, and computer science

### **COURSE OBJECTIVES:**

- Compare and contrast the differences between Agile and other Traditional project management Methodologies.
- Interpret and apply various Scrum principles, phases and activities of the Scrum methodology
- Develop the Agile Scrum planning principles for real life situations and learn the basics of SAFe for scaled agile
- Understand the Agile Testing principles for real life situations and learn the basics of SAFe for scaled agile
- Identify and use the various tools for Agile development and DevOps principles for CI/CD.

### **COURSE OUTCOMES:**

| <b>CO</b>  | <b>After the completion of the course the student should be able to</b>                                            |

**COURSE Pre-Requisite:** Linear Algebra, Probability, Computer Science Basics.

### **COURSE DESCRIPTION:**

Covers the mathematical and computer science foundations of quantum computation, focusing **on** the circuit model, quantum states, and measurements. The course explores sophisticated quantum algorithms that offer advantages over classical counterparts, including search and factoring, while also introducing near-term topics like quantum error correction and fault tolerance.

### **COURSE OBJECTIVES:**

- To understand the quantum model of computation and the basic principles of quantum mechanics.
- To analyze the performance of quantum algorithms such as Deutsch-Jozsa, Grover's, and Shor's algorithm.
- To explain essential concepts including entanglement, no-cloning, and quantum teleportation.
- To get the idea of near-term quantum computing, including adiabatic optimization and quantum chemistry simulations.
- To describe the elements of fault-tolerant computing and quantum error correction.

### **COURSE OUTCOMES:**

| <b>CO</b>  | <b>After the completion of the course the student should be able to</b>                          |
|------------|--------------------------------------------------------------------------------------------------|
| <b>CO1</b> | Explain basic quantum protocols such as teleportation and super dense coding.                    |
| <b>CO2</b> | Interpret quantum circuits and universality in the context of the standard gate set.             |
| <b>CO3</b> | Describe quantum algorithms for search and factoring and identify their complexity classes.      |
| <b>CO4</b> | Identify applications of quantum computing in fields such as quantum chemistry and Optimization. |
| <b>CO5</b> | Describe principles of quantum error correction and fault-tolerant quantum architecture.         |

**ASSESSMENT SCHEME:**

Two components of Continuous Assessment (CA-1, CA-2), Mid Semester Examination (MSE) and End Semester Examination (ESE) having 30%, 20% and 50% weightage respectively.

| Assessment Component | Marks |
|----------------------|-------|
| CA1                  | 15    |
| MSE                  | 20    |
| CA2                  | 15    |
| ESE                  | 50    |

**CA1** and **CA2** are based on Assignment/ Declared test/Quiz/Seminar/Group discussions presentation, etc.

**MSE** is based on 50% of course content.

**ESE** is based on 100% course content with 60-70% weightage for course content covered after MSE

**CO-PO MAPPING:**

| CO  | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 |
|-----|-----|-----|-----|-----|-----|-----|
| CO1 | 3   | 2   | 1   | 1   | 2   | 1   |
| CO2 | 3   | 2   | 3   | 1   | 3   | 0   |
| CO3 | 3   | 3   | 2   | 2   | 2   | 1   |
| CO4 | 2   | 2   | 3   | 3   | 3   | 2   |
| CO5 | 3   | 3   | 2   | 2   | 2   | 1   |

## COURSE CONTENTS:

### **COURSE PRE-REQUISITE:**

Students should have prior knowledge of:

1. Familiarity with project-based learning (e.g., mini projects, seminars, undergraduate theses)
2. Knowledge of basic statistics (mean, median, variance, standard deviation, probability concepts).
3. Basic skills in technical writing (reports, presentations, documentation).
4. Sound fundamentals of the core engineering/science domain.

### **COURSE DESCRIPTION:**

This course introduces postgraduate students to the principles, methods, and practices of scientific research and technical writing. It focuses on developing the ability to identify research problems, formulate objectives and hypotheses, conduct literature surveys, and apply appropriate research methodologies in engineering and technology domains. The course also covers quantitative and qualitative research techniques, data collection and analysis methods, statistical tools, interpretation of results, and ethical issues in research. Students will gain knowledge of research paper writing, report preparation, citation standards, plagiarism awareness, intellectual property rights, and publication processes. The course enables learners to undertake independent research, prepare dissertations, and contribute effectively to innovation and advanced technological development.

### **COURSE OBJECTIVES:**

The course aims to:

- Understand the philosophy of research in general
- Understand basic concepts of research and its methodologies
- Learn the methodology to conduct the Literature Survey
- Acquaint with the tools, techniques, and processes of doing research
- Learn the effective report writing skills and allied documentations

**COURSE OUTCOMES:**

| CO  | After the completion of the course the student should be able to                                                                                       |
|-----|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO1 | Define research and explain its essential characteristics with examples from engineering and science fields.                                           |
| CO2 | Identify and apply different types of research (basic, applied, qualitative, quantitative, exploratory, descriptive, etc.) to specific problems.       |
| CO3 | Analyze the outcomes of research such as publications, patents, and technological contributions, and understand their societal and industrial impacts. |
| CO4 | Apply ANOVA and ANCOVA techniques for effective experimental data analysis and interpretation of results.                                              |
| CO5 | Understand and apply the basics of Intellectual Property Rights (IPR) to safeguard innovative research and prevent unethical practices.                |

**CO-PO MAPPING:**

| CO  | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 |
|-----|-----|-----|-----|-----|-----|-----|
| CO1 | 2   | 1   | –   | –   | –   | –   |
| CO2 | 2   | 3   | 1   | 2   | 1   | –   |
| CO3 | 1   | 2   | 2   | 2   | –   | 2   |
| CO4 | 2   | 3   | 1   | 3   | 2   | –   |
| CO5 | 1   | 1   | 1   | –   | –   | 1   |

**ASSESSMENT SCHEME:**

Two components of Continuous Assessment (CA-1, CA-2), Mid Semester Examination (MSE) and End Semester Examination (ESE) having 30%, 20% and 50% weightage respectively.

| Assessment Component | Marks |
|----------------------|-------|
| CA1                  | 15    |
| MSE                  | 20    |
| CA2                  | 15    |
| ESE                  | 50    |

**CA1** and **CA2** are based on Assignment/ Declared test/ Quiz/Seminar/Group discussions presentation, etc.

**MSE** is based on 50% of course content.

**ESE** is based on 100% course content with 60-70% weightage for course content covered after MSE

|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| 1       | <b>Unit I Definition and Characteristics of Research:</b><br><br>Transaction Basic of Research: Definition; Concept of Construct, Postulate, Proposition, Thesis, Hypothesis, Law, Principle. Philosophy and validity of research. Objective of research. Various functions that describe characteristics of research such as systematic, valid, verifiable, empirical and critical approach, Types - Pure and applied research. Descriptive and explanatory research. Qualitative and quantitative approaches. Engineering Research: Why? Research Questions, Engineering Ethics, conclusive proof-what constitutes, A research project-Why take on? Case Study : Code of Ethics, IEEE Code of Ethics, ACM Software Engineering Code of Ethics and Professional Practice, Code of Ethics especially covering Engineering discipline, various aspects- environment, sustainable outcomes, employer, general public, and Nation, Engineering Disasters. | 09    |
| 2       | <b>Unit II - Literature Search and Review:</b><br><br>Literature Review, Types of review, Developing the objectives, Preparing the research design including sample Design, Sample size. Archival Literature, why should engineers be ethical? Types of publications- Journal papers, conference papers, books, standards, patents, theses, trade magazine, newspaper article, infomercials, advertisement, Wikipedia & websites, Measures of research impact, publication cost. Case Study : Engineering dictionary, Shodhganga, The Library of Congress, Research gate, Google Scholar, Bibliometrics, Citations, Impact Factor, h-index, I-index, plagiarism, copyright infringement                                                                                                                                                                                                                                                                | 09    |
| 3.      | <b>Unit III - Analysis of Variance and Covariance:</b><br><br>Basic principle of Analysis of Variance, ANOVA Technique, Setting up Analysis of Variance Table, short-cut method for one-way ANOVA, Coding method, Two-way ANOVA, ANOVA in Latin-square design, analysis of co-variance (ANCOVA), assumptions in ANCOVA. Academic Ethics: Plagiarism, exposure on anti-plagiarism tools.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 09    |
| 4       | <b>Unit IV - Technical Writing and IPR:</b><br><br>Academic writing, sources of information, assessment of quality of journals and articles, writing scientific report, structure and component of research report, types of report – technical reports and thesis, SCOPUS Index, citations, search engines beyond google, impact factor, H-Index. IPR: What is IPR?, importance of patents, types of IPR, process of patent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 09    |

|   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |    |

| <b>Title of the Course:</b> Advanced Laboratory Practices-I | <b>L</b> | <b>T</b> | <b>P</b> | <b>Credit</b> |
| <b>Course Code:</b> 26MFE1106L                              | --       | --       | 4        | 2             |

**COURSE Pre-Requisite:** Theory of Computation, Design and Analysis of Algorithm, Basics of Programming.

**COURSE DESCRIPTION:**

Advanced DAA explores the theoretical limits of computation and sophisticated techniques for designing efficient algorithms. The course emphasizes not just "how" an algorithm works, but "why" it works efficiently in terms of mathematical proofs, amortized analysis, and probabilistic outcomes. It is designed for students who have already mastered basic data structures and algorithmic strategies like Greedy and Divide & Conquer.

**COURSE OBJECTIVES:**

- To introduce students to the advanced methods of designing and analyzing algorithms.
- To allow students choose appropriate algorithm and use it for a specific problem..
- To impart knowledge of different classes of problems along with recent developments in the area of algorithmic design.

**COURSE OUTCOMES:**

| <b>CO</b>  | <b>After the completion of the course the student should be able to</b> |
|------------|-------------------------------------------------------------------------|
| <b>CO1</b> | Apply algorithm to solve problem                                        |
| <b>CO2</b> | Analyze algorithms involving different strategies for problem solving   |
| <b>CO3</b> | Evaluate the complexity of the algorithm                                |
| <b>CO4</b> | Develop the solution for open-ended problems and document it.           |

### ASSESSMENT SCHEME:

| Assessment Component | Marks |
|----------------------|-------|
| CA1                  | 25    |
| MSE                  | --    |
| CA2                  | 25    |
| POE                  | 50    |

### ASSESSMENT DETAILS:

- POE is based on 100% course content with 50% weightage for course

### CO-PO Mapping:

| CO  | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 |
|-----|-----|-----|-----|-----|-----|-----|
| CO1 | 3   | 3   | 2   | 1   | 1   | -   |
| CO2 | 2   | 3   | 2   | 2   | 1   | -   |
| CO3 | 3   | 3   | 1   | 2   | 1   | -   |
| CO4 | 2   | 2   | 3   | 3   | 2   | 1   |

## LIST OF EXPERIMENTS:

### Note:

Students should implement any Four DAA practical with any four experiments of Group A and four experiments of Group B.

| Experiment No. | Experiment Title                      | Hours |
|----------------|---------------------------------------|-------|
| 1              | Implement various algorithms          | 2     |
| 2              | Implement BFS algorithm               | 2     |
| 3              | Implement DFS algorithm               | 2     |
| 4              | Implement Dijkstra algorithm          | 2     |
| 5              | Implement kruskal's algorithm         | 2     |
| 6              | Implement Floyd-Warshall algorithm    | 2     |
| 7              | Implement matrix multiplication.      | 2     |
| 8              | Implement RSA algorithm               | 2     |
| 9              | Implement CRT                         | 2     |
| 10             | Implement Fourier transform algorithm | 2     |

- Group A:**
1. Big Data Analytics and Visualization
  2. Computer Vision
  3. Pervasive Computing

| Experiment No. | Experiment Title                                                                  | Hours |
|----------------|-----------------------------------------------------------------------------------|-------|
| 1              | Installation of Hadoop Framework, it's components and study the HADOOP ecosystem. | 2     |
| 2              | Write a program to implement word count program using MapReduce                   | 2     |
| 3              | Implementing DGIM algorithm using any Programming Language                        | 2     |
| 4              | Image Loading, Exploring and displaying an Image.                                 | 2     |
| 5              | Access and Manipulate of Image Pixels.                                            | 2     |
| 6              | Addition operation of Two Images                                                  | 2     |
| 7              | Edge Detection operation using Sobel and Scharr Gradients                         | 2     |
| 8              | Develop an application that uses GUI components, Font and Colors.                 | 2     |
| 9              | Develop an application that uses Layout Managers and event listeners.             | 2     |
| 10             | Develop a native application that uses GPS location information.                  | 2     |

- Group B:**
1. Augmented Reality and Virtual Reality
  2. Agile Methodologies
  3. Quantum Computing

| Experiment No. | Experiment Title                                                                                                                                                                                                                                                                                                                                          | Hours |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| 1              | Installation of Unity and Visual Studio, setting up Unity for VR development, understanding documentation of the same.                                                                                                                                                                                                                                    | 2     |
| 2              | Demonstration of the working of HTC Vive, Google Cardboard, Google Daydream and Samsung gear VR.                                                                                                                                                                                                                                                          | 2     |
| 3              | Develop a scene in Unity that includes:<br>I. a cube, plane and sphere, apply transformations on the 3 game objects.<br>II. add a video and audio source                                                                                                                                                                                                  | 2     |
| 4              | Develop a scene in Unity that includes a cube, plane and sphere. Create a new material and texture separately for three Game objects. Change the colour, material and texture of each Game object separately in the scene. Write a C# program in visual studio to change the colour and material/texture of the game objects dynamically on button click. | 2     |
| 5              | Propose a sample project with its objectives, vision statement, use cases and UML diagram.                                                                                                                                                                                                                                                                | 2     |
| 6              | Compile project release map, user stories for proposed project.                                                                                                                                                                                                                                                                                           | 2     |
| 7              | Identify the story boarding task and detailed release plan for the project.                                                                                                                                                                                                                                                                               | 2     |
| 8              | Implement single qubit gate simulation- Quantum composer.                                                                                                                                                                                                                                                                                                 | 2     |
| 9              | Implement multiple qubit gate simulation- Quantum composer                                                                                                                                                                                                                                                                                                | 2     |
| 10             | Composing simple quantum circuits with Q-Gates and measuring output into classical bits.                                                                                                                                                                                                                                                                  | 2     |

| <b>Course Code:</b> 26MFE1107                          | - | - | 2 | Audit Course |

### **COURSE PRE-REQUISITE:**

1. No prior experience in Yoga or physical training is required.
2. Students must be physically and mentally fit to perform basic exercises. (Any severe medical conditions should be reported to the instructor beforehand).
3. A receptive mindset towards holistic health, mindfulness, and discipline.

### **COURSE DESCRIPTION:**

This practical course provides hands-on training in Yoga to enhance physical and mental well-being and effectively manage academic and professional stress. Students will learn and safely practice dynamic sequences like Surya Namaskar, foundational postures (Asanas), breath control (Pranayama), and internal purification techniques (Kriyas). By integrating meditation, deep relaxation (Yoga Nidra), and a balanced yogic diet, students will develop practical skills to regulate their nervous system, improve mental focus, and build lifelong physical and emotional resilience.

### **COURSE OBJECTIVES:**

- To introduce the philosophical foundations of Yoga and fundamental conditioning practices for physical preparedness.
- To demonstrate dynamic sequences and static foundational asanas to improve flexibility, strength, and postural stability.
- To teach relaxing physical postures and the mechanics of the yogic breathing cycle for physiological balance.
- To impart techniques of advanced breath control (Pranayama) and internal cleansing (Kriyas) for nervous system regulation.
- To guide students through meditation, concentration, and deep relaxation techniques for emotional and mental release.

**COURSE OUTCOMES:**

|     |                                                                                                                                            |
|-----|--------------------------------------------------------------------------------------------------------------------------------------------|
| CO  | After the completion of the course the student should be able to                                                                           |
| CO1 | Explain the core philosophy of Ashtanga Yoga and perform foundational conditioning and loosening exercises safely.                         |
| CO2 | Demonstrate Surya Namaskar and foundational standing/sitting asanas to enhance physical stability, alignment, and flexibility.             |
| CO3 | Practice prone and supine relaxation asanas and utilize the correct mechanics of the breathing cycle (Puraka, Rechaka, Kumbhaka).          |
| CO4 | Execute specific Pranayama techniques and purification Kriyas (Kapalbhati, Tratak) to regulate the nervous system and clear mental blocks. |
| CO5 | Apply concentration (Dharana), Omkar chanting, and Yoga Nidra techniques to achieve deep mental relaxation and emotional balance.          |

**CO-PO MAPPING:**
